2D Molecule	SMILES
 <p>Chemical structure of N-(2-amino-3-methylbutanoyl)glycine. It consists of a central amide bond. On the left, a 2-amino-3-methylbutanoyl group is attached to the carbonyl carbon. This group has a methyl group (CH₃) at the 3-position, an amino group (H₂N) at the 2-position, and a carbonyl group (C=O) at the 1-position. On the right, a glycine group is attached to the amide nitrogen, consisting of a methylene group (CH₂) and a carboxylic acid group (COOH).</p>	<chem>C(CNC(C(C)N)=O)(=O)O</chem>
